OM SPACE
ROCKET AND EXPLORATION

BEYOND THE IMAGINATION

India’s first reusable small satellite launch vehicle

Ahmedabad, India | Sharjah, UAE

Problem

01

Limited Options

Shortage of small, dedicated launch vehicles

02

Long Wait Time

Satellite launch windows typically delayed by 18–24 months

03

Long Gaps

Post-launch downtime is 5–6 months for traditional rocket systems

Solution

Infinity-I

Reusable and cost-efficient rocket for small satellite launches

Rapid Turnaround

Can relaunch within 24–48 hours

Proven Capability

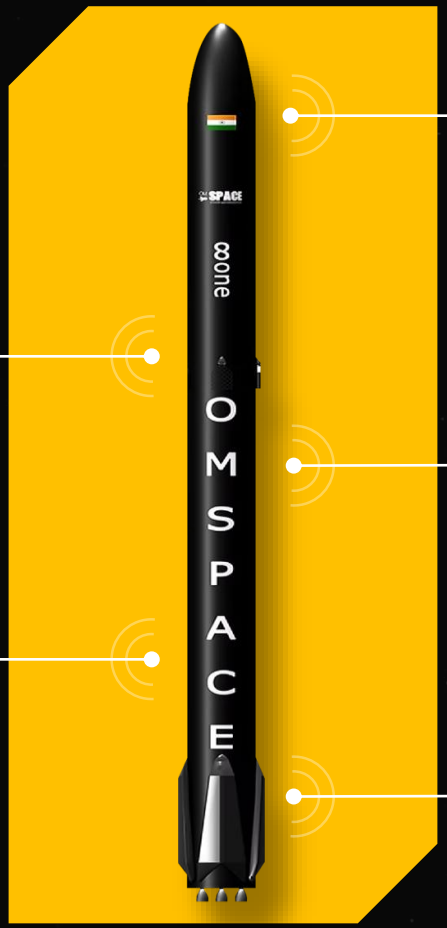
Prototype can deploy 100 kg to 500 km altitude

Product

Infinity-I Watch video

- India's 1st Reusable Small Launch Vehicle (RSLV)

- Liquid cryogenic fuel



- Rocket cone to carry small satellite

- Advanced composite structure

- 3D-printed engine

Technical Milestones

Q2 2023	Rocket engine design & blueprint
Q1 2024	CFD simulations for engine components
Q3 2024	Successful solid engine hot fire test
Q4 2024	Successful cryogenic engine ignitor testing
Q2 2025	Successful cryogenic engine injector testing

Market Opportunity

$5.04 billion

The global market size, with a 13.7% CAGR (2023-2033)

20,000+

Small satellite launches expected globally in the next decade

https://www.polarismarketresearch.com/industry-analysis/satellite-launch-vehicle-market

https://market.us/report/small-satellites-market/

Business Model

₹ 12 Cr per launch

Based on 100 kg payload at ~ INR 12 Lacs per kg

Market Adoption

Outreach

Industry conferences, Trade shows, Webinars, Digital marketing

Pilot Programs

Early adapters
Pilot missions

Partnerships

Satellite manufacturers, Government entities, Academic institutions

Achievements

- ✓ 7 MoUs signed worth **$2M+**
- ✓ AWS Space Tech Accelerator (T-Hub, Hyderabad)
- ✓ Best Space Tech Startup (WSRO), Featured in TOI
- ✓ Incubated in CrADLE-EDII, Ahmedabad, Gujarat.
- ✓ Partnerships: Taiwan, UAE, Russia, Australia, Ukraine
- ✓ $12,000 grant (OCD) from Gujarat Govt.

Competitive Landscape

Company	OM SPACE	SKYROOT	AGNIKUL	ROCKETLAB
Country	INIndia	INIndia	INIndia	USUSA
Reusable	✓	✗	✗	Partial
Relaunch	24–48h	No	No	Weeks
Cost/kg	$14.2k	$20.4k	$22.5k	$37.5k
Payload	100 kg	250 kg	150 kg	200 kg

Roadmap

Q4 2025	Engine final testing & re-landing system trials
Q2 2026	Subsystem fabrication & testing
Q4 2026	Suborbital launch prep with liquid engine
Q3 2027	Suborbital rocket launch
Q1 2028	Orbital rocket launch prep
Q2 2028	First orbital-class rocket launch
Q3 2029	15+ launches/year, $21M+ revenue

Why Invest now?

- ✓ India Space Policy 2023 enabling private participation
- ✓ Gujarat's State – first in India to localize the space ecosystem
- ✓ 100% FDI allowed in the space sector
- ✓ $128M VC fund launched to support the space economy
- ✓ Growing startup presence with ISRO's support
- ✓ Cost-effective launch capabilities with increasing global demand
- ✓ Global partnerships like Artemis Accords (India-NASA missions)

Omspace SpaceTech Training Program

Building India's Next Space Workforce

- ✓ 100% FDI allowed in the space sector
- ✓ 55,000+ students trained
- ✓ 37+ university partnerships
- ✓ 30% placed abroad | 25% job placement
- ✓ Revenue: $42K (2024) → On track for $120K in 2025
- ✓ Hands-on skills: propulsion, avionics, mission ops

Environmental Impact

Aspect	Traditional Rockets	Omspace Reusable Rocket
Emissions	CO_2, NO_x, toxic gases, soot	Mainly water vapor + CO_2 (carbon-neutral)
Ozone Impact	Emits HCl & alumina (ozone-depleting)	Zero ozone-depleting emissions
Ground Risk	Toxic propellants contaminate soil/water	Non-toxic LOX & bio-methane
Waste & Debris	High material waste, ocean/space debris	Reusable stages, 90% less waste
Fuel Lifecycle	Fossil-fuel based, carbon-intensive	Bio-methane can be carbon-negative
