SIMBA

The go to platform for
hiring AI-Native Workforce

Why Now?

Software Engineering is undergoing once-in-a-decade transformation

The AI-Native Programming Generation has Arrived!

2022

Copilot launched

2023

GPT-4 released

2024

AI-native tools like Cursor, Devin, etc. explode

2025

First AI-native graduates enter workforce

Companies are Demanding AI-Native Workforce

Over 30% of Microsoft's code is now AI-generated, says CEO Satya Nadella

Nadella's remarks come amid a growing debate in the tech industry over vibe-coding and the impact of AI on software development job roles.

"6. "Roles within software engineering are progressively transitioning to AI-assisted programming, utilizing tools like GitHub Copilot and Cursor."
— Forbes Tech Council [7] "

"We are entering a new era of coding."

Nobel Prize Winner and @GoogleDeepMind CEO Demis Hassabis on coding with natural language.

An AI Will Be The World's Best Programmer By The End Of 2025: OpenAI CEO Sam Altman

95% Of Code Will Be Written By AI In 5 Years: Microsoft CTO Kevin Scott

The Inevitable future of tech hiring

Most sought after skill

Collaborate with AI to build products at 10x speed

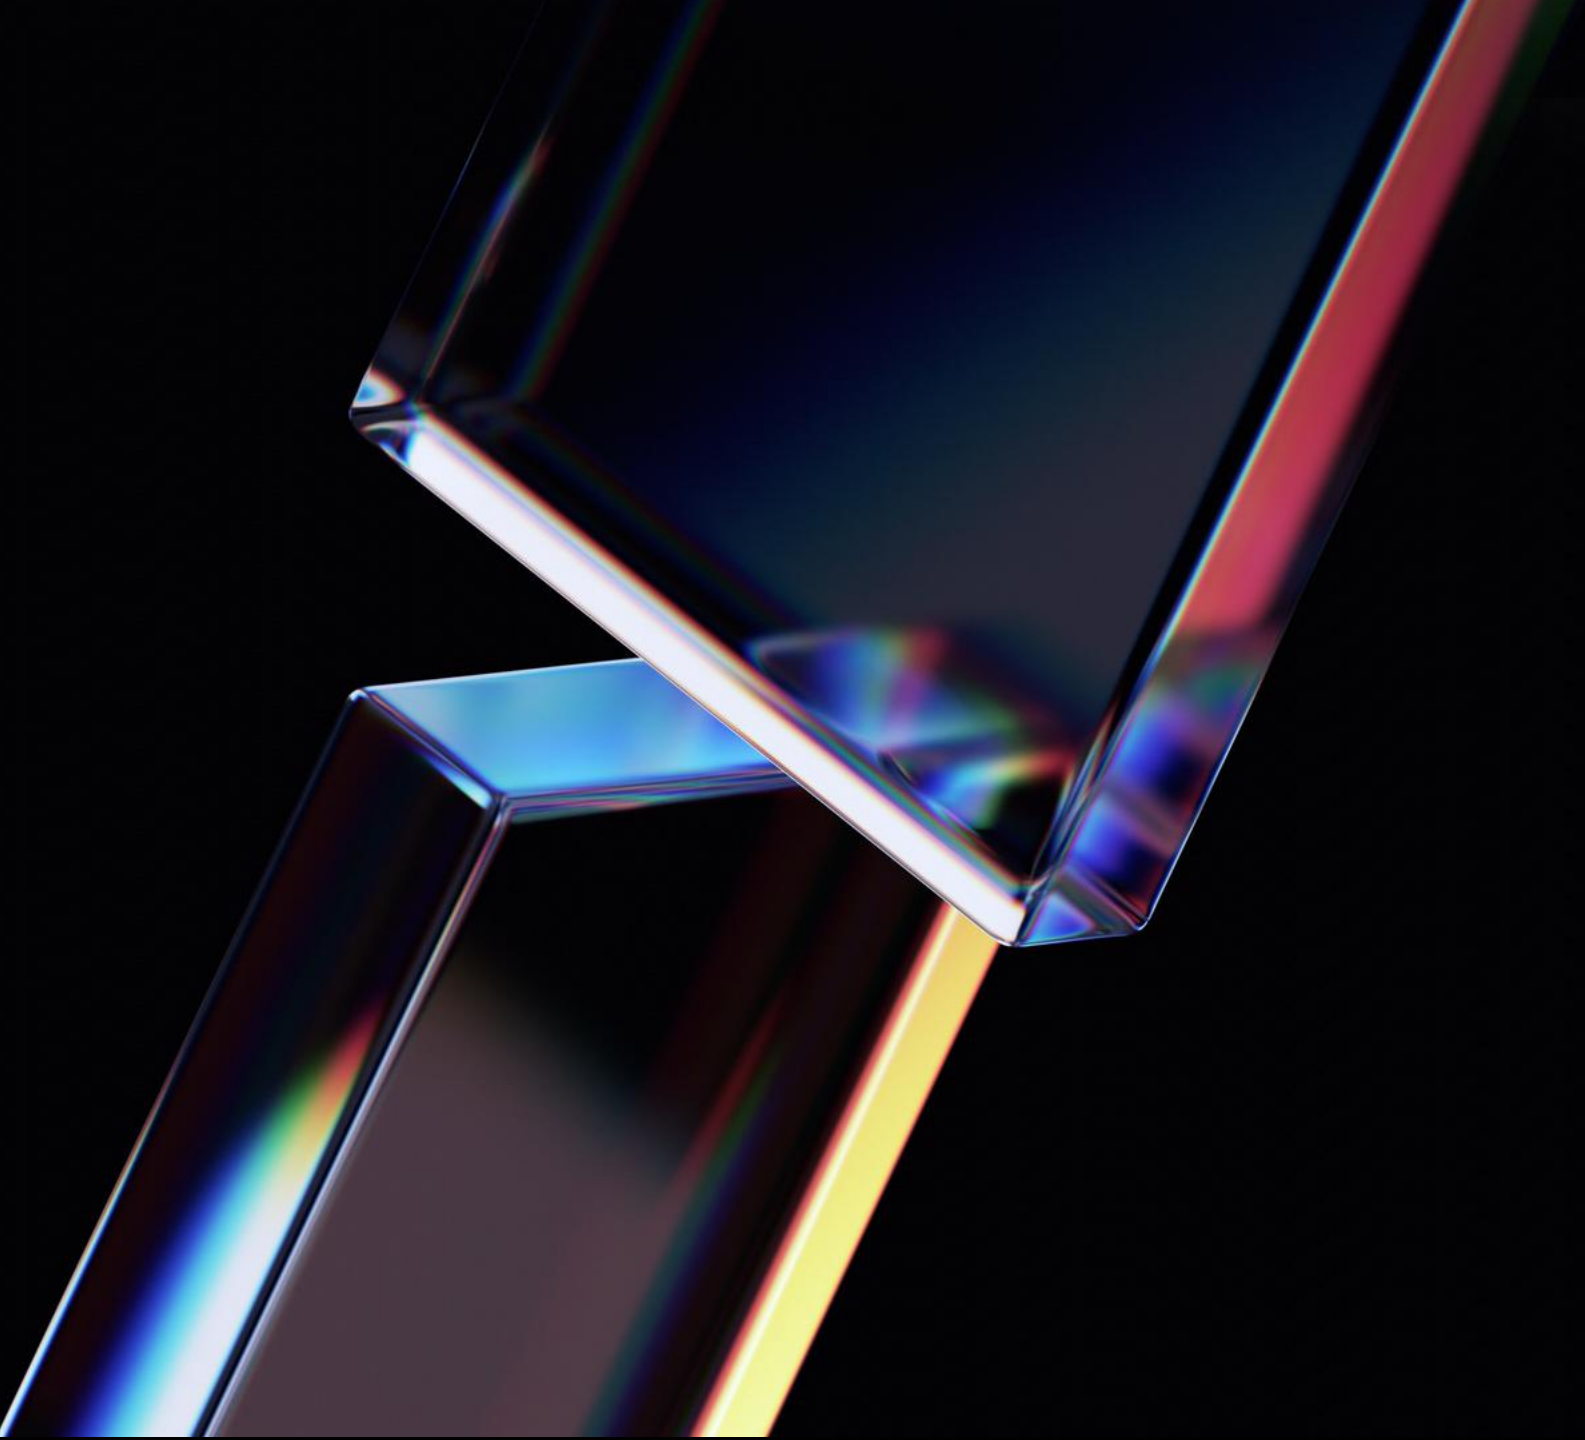
Yet no Recruitment Companies are building for this shift!

In 2025,

99%

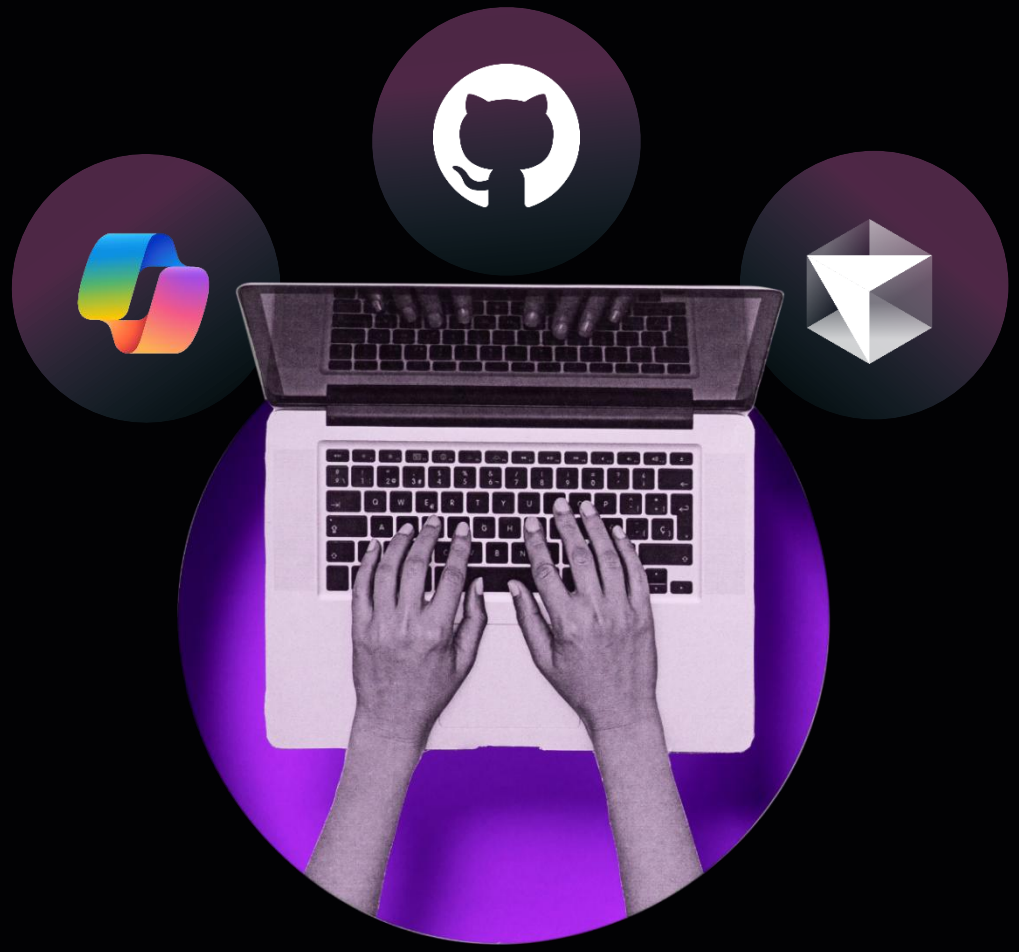
of top recruitment companies only offer DSA assessments

10M+ annual **tech hires across startups, SMEs,** & **enterprises will** be **evaluated for AI nativeness**



The Product

The Product

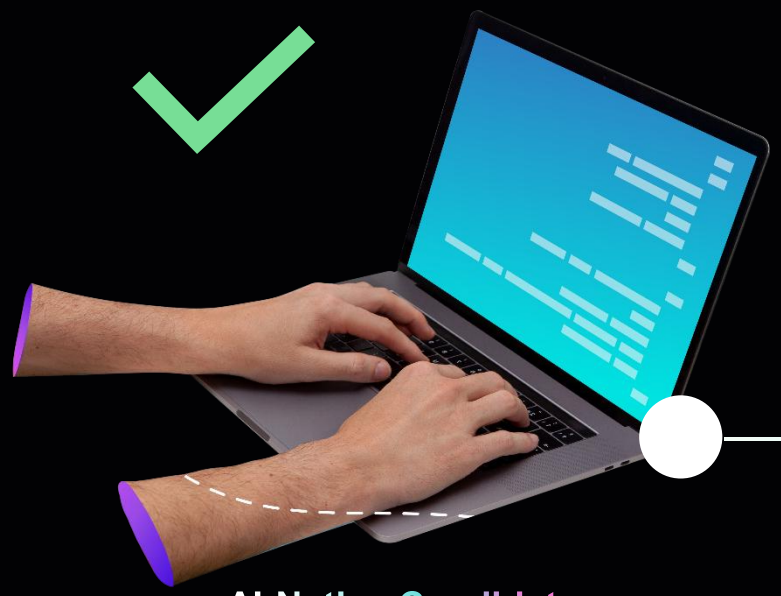


World's First Recruitment Platform to identify the best AI-native engineers;

who collaborate with AI tools like Copilot and Cursor to build and ship products 10x faster!

World’s First Recruitment Platform for Hiring AI Native Workforce

SIMBA identifies candidates who leverage AI to become 10x more productive



AI-Native Candidate

Traditional Candidate

Candidates solve real-world problems using AI tools.

Evaluation based on how well they collaborate with AI tools to maximize productivity.

Metrics like prompt quality, iteration speed, debugging skill, AI tool fluency are evaluated

How it works

Creates assessments within a user's natural work environment and quantifies their performance.

Open-Ended, Project-Based Tasks — 01

Instead of algorithmic assessments, candidates solve real project problems (e,g, building a complex application from scratch).

AI Collaboration Analytics — 02

The platform tracks how effectively candidates use AI tools (prompt quality, iteration patterns, human-AI synergy).

Multi-Dimensional Scoring — 03

Evaluation across code quality, speed, collaboration with AI, and problem-solving—not just final output.

Business Model

Licensing

Large organizations with high-volume assessments, integrations, and custom features.

Cost Type

Per candidate Evaluated

Pay-Per-Hire

SMBs with variable or seasonal hiring needs.

Cost Type

Per Candidate Hired (8% CTC)

What is this raise for?

USD 1.2 mil (~INR 10Cr)

to ramp up our product development and build our core team

35% Funds to be spent on building the **Core Tech and Sales Team**

45% Funds allocated to building **the MVP and upgrading the Platform**

20% Funds on **Candidate Engagement** and **Memory Loops**

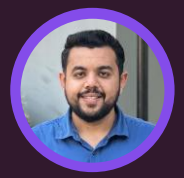
Our Team

Dhruv Sood - CEO

IIT Delhi alumnus, 6+ years of experience across startups and consulting (ex-BCG)

Business

Joan Listle
Enterprise Sales, ex-Hays



Vijay Sahni
Sales & Operations

Shubham Chaudhary - CPO
IIT Delhi alumnus
ex-Amazon, ex-Citi

Abhimanyu Sood - CTO

8+ years of recruitment industry experience

Saqib Shamsi
AI Consultant

Shrey Bisht

Marketing & Design

AI & technology

Product & design
